

3.6 Introduction to trigonometry

Figure 3.8 shows two triangles whose angles are the same but the lengths of whose sides vary. In order that the angles remain the same the lengths of the corresponding sides must vary in the same ratio as shown.

Fig.3.8 Similar triangles

It can be seen, therefore, that the size of the acute angles in any right-angled triangle can be stated as the ratio of any two of the sides. Figure 3.9 shows a right-angled triangle and shows how the sides of the triangle are named.

Fig.3.9 The sides of the right-angled triangle

The ratios of these sides for a given angle are given special names as shown in Fig.3.10. They are called the *trigonometrical ratios*. To keep things simple only the right-angled triangle will be considered in this chapter, and for most workshop purposes this is sufficient. At a more advanced level, trigonometry can be applied to any sort of triangle and angles of any magnitude.

$$\begin{aligned}\text{Tangent (tan) } \theta &= \frac{\text{opposite}}{\text{adjacent}} = \frac{a}{b} \\ \text{Cosine (cos) } \theta &= \frac{\text{adjacent}}{\text{hypotenuse}} = \frac{b}{c} \\ \text{Sine (sin) } \theta &= \frac{\text{opposite}}{\text{hypotenuse}} = \frac{a}{c}\end{aligned}$$

3.7 Trigonometrical tables

These are used to evaluate problems involving the sides and angles of triangles (trigonometry). Tables of natural tangents, natural sines, and natural cosines are included at the end of this book. Trigonometrical tables are used in a similar manner to the tables of logarithms introduced in *Basic Engineering*. Figures 3.11 to 3.13 inclusive show how the tables should be read. Figures 3.14 to 3.16 give examples involving the use of trigonometry.

$$\sin 34^{\circ} 17' = 0.5621 + 0.0012 = \underline{0.5633}$$

1. Enter the tables on line 34°
2. Follow the line to the column headed 12' and note the number group (0.5621)
3. Follow the line to the mean difference column 5' and note the number group (0.0012)
4. Add (2) and (3). $\sin 34^{\circ} 17' = 0.5621 + 0.0012 = \underline{0.5633}$

Examples:

$$\sin 30^{\circ} 0' = 0.5000$$

$$\sin^{-1} 0.5150 = 31^{\circ} 0'$$

$$\sin 31^{\circ} 30' = 0.5225$$

$$\sin^{-1} 0.5388 = 32^{\circ} 36'$$

$$\sin 32^{\circ} 45' = 0.5409$$

$$\sin^{-1} 0.5558 = 33^{\circ} 46'$$

$$\sin 33^{\circ} 1' = 0.5448$$

$$\sin^{-1} 0.5594 = 34^{\circ} 1'$$

Notes:

1. Since the number groups read from the table are ratios they have no units
2. \sin^{-1} means: 'the sine whose angle is -----'

1. Enter the tables on line 49°
2. Follow the line to the column headed 30' and note the number group (0.6494)
3. Follow the line to the mean difference column 4' and note the number group (0.0009)
4. SUBTRACT (3) from (2). $\cos 49^{\circ} 34' = 0.6494 - 0.0009 = \underline{0.6485}$

Examples:

$$\cos 46^{\circ} 0' = 0.6947$$

$$\cos^{-1} 0.6820 = 47^{\circ} 0'$$

$$\cos 45^{\circ} 24' = 0.7022$$
